# Solution Introduction

Digital transformation in the manufacturing industry has increased willingness to modify equipment. Advantech's MachineUnite is a one-stop, end-to-cloud intelligent equipment management solution aimed at industrial infrastructure equipment. This solution is adaptable to air compressors, electric motors, pumps, injection molding machines, vulcanizing machines, and steam turbines. It delivers equipment management and configuration templates to diverse industries; and empowers edge equipment connectivity, data collection, and equipment monitoring. It further accommodates fault alarms, operation, and maintenance/preventive maintenance. MachineUnite also supports multiple deployment options for WISE-STACK Edge and public/private clouds enabling users to complete equipment management deployment quickly.

## One-stop integration with comprehensive services

One-click subscription, fast delivery of IaaS, PaaS, and SaaS; and automatic deployment of dependent services.

## Ready-to-use low-code configuration solutions

Configure the interface of end-to-cloud equipment to access and upload data to the cloud. Avoid developing templates by directly applying pre-made equipment templates.

## Flexible framework and service expansion

Provide an open-source microservice framework that supports tens of millions of point access and third-party service expansion.

# Target Applications

Electric Motor

Injection Molding Machine

Air Compressors

Pump

Vulcanizing Machine

Steam Turbine

# Solution Benefits

## 1 Economic benefits

- ✓ Improve equipment energy efficiency and maximize equipment value
- ✓ Unify equipment and parts management to increase asset value
- ✓ Regular operation, maintenance, tracking, and management extends equipment lifespan

## 2 Management benefits

- ✓ Unified management saves 50% more management time
- ✓ Comprehensive end-to-cloud solution reduces solution configuration complexity by 70%
- ✓ Replicated plan templates reduce integration cycle from 1 month to 2 hours

## 3 Cost-effectiveness

- ✓ Remote operation and maintenance interfaces save travel expenses by 66%
- ✓ Reasonable equipment resource arrangements optimize investment costs

# Industrial Apps

## MachineUnit Industrial Equipment Management

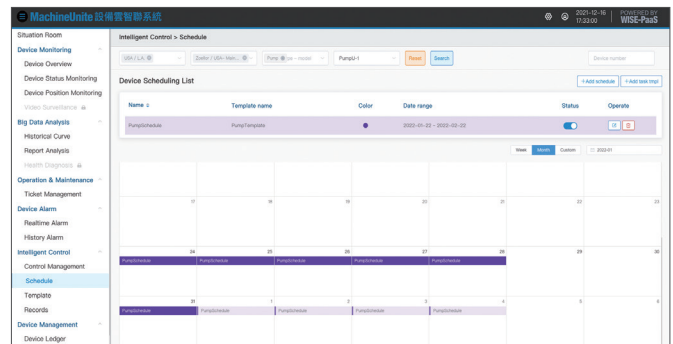

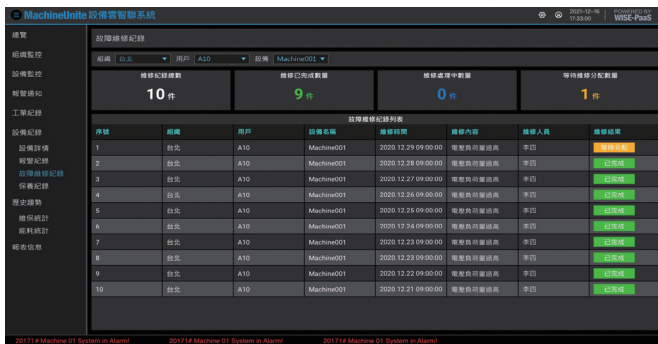

### Comprehensive Monitoring

- Comprehensive equipment monitoring
- Key data monitoring
- Equipment performance monitoring
- Remote parameter configuration

### Anomaly Warnings

- Various alarm rules
- Alarm push notification
- Automatic workforce dispatching
- Abnormity statistics

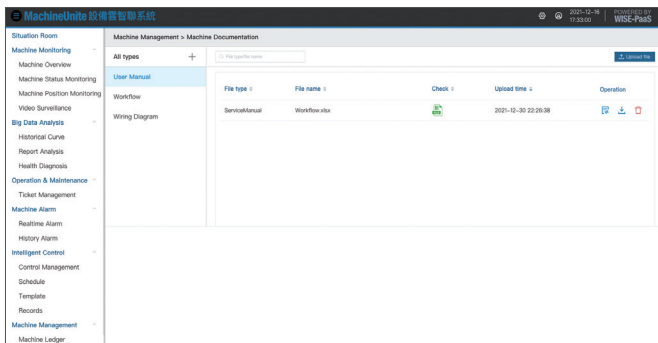

### Operation and Maintenance (M2I-32B)

- Schedule regular maintenance services
- Notify alarm events in advance
- Maintenance execution tracking
- Monitor maintenance analysis

### Remote Maintenance

- Remotely set device values
- Set up scheduled plans and automatically execute value settings

### Data Analysis

- View equipment documents, maintenance manuals, and wiring diagrams online
- Check equipment information from anywhere

### Fault Diagnosis

- Predict machine health
- Predict machine degradation

# Application Story

## MachineUnite Enables Air Compressor Equipment Manufacturers to Create Service Value During Operation and Maintenance

### Overview

Tong Cheng Iron Works Co., Ltd., an established air compressor manufacturer in Taiwan, has been selling products worldwide for 60 years. With a view toward the Internet of Things (IoT), Industry 4.0, factory automation, and growing customer demand, Tong Cheng recognized the urgency of industrial transformation. Tong Cheng cooperated with Advantech to develop a cutting-edge, intelligent solution aimed at maintaining their leading role in the industry.

### Challenges

- Traditional air compressors cannot effectively manage operating times and prevent business owners from saving production costs
- High machine loads prevent the early detection of data abnormalities
- Difficulties calculating the maintenance cycle of air compressor parts results in air compressor component failures which affect factory supply

### Solution

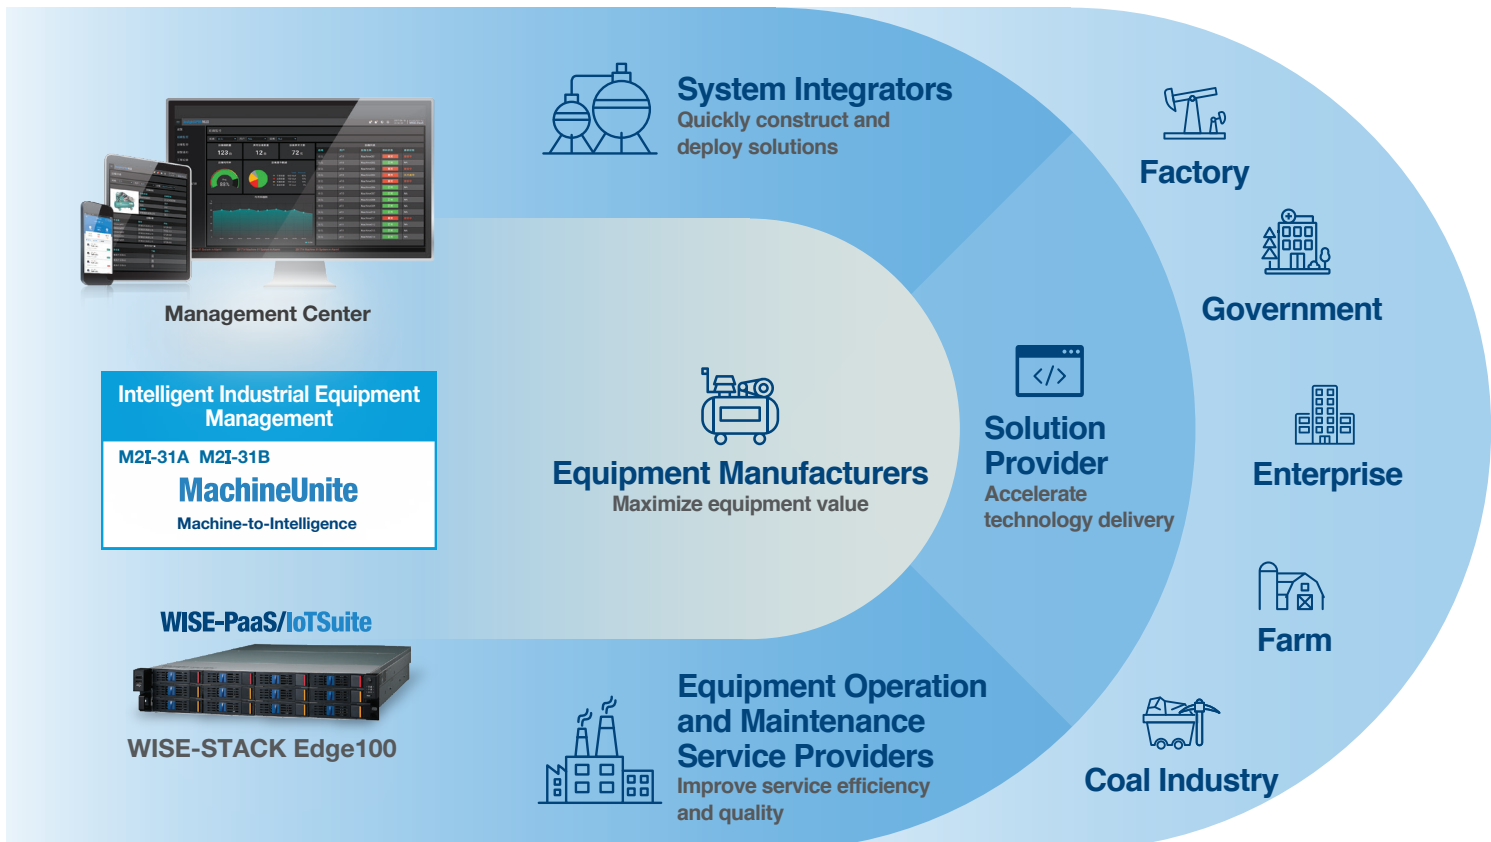

Advantech's MachineUnite helps Tong Cheng manage cloud data to create new business opportunities and services.

- Visualized management enables customers and distributors to view air compressor operation in real-time, and accurately track machine statuses
- Alarms are triggered instantly following the detection of machine abnormalities; replacement parts are prepared according to equipment status and service lifespan
- Template-based configuration empowers IT personnel to deploy solutions quickly
- Comprehensive management of equipment used in various branches and offices helps manage equipment maintenance statuses and predict the quantity of spare parts needed

### Benefits

MachineUnite allows users to survey the trends and changes of energy use efficiency at any time. This feature empowers the recording of power consumption information and efficiency optimization configuration — saving 30% more energy.
